Disassembly

The following components can easily be disassembled for repair, maintenance, or recycling: Remove and replace the upholstery from the seat – upholstery is without glue, featuring a zipper at the back for easier removal and refurbishment. There is a visible strap in the middle of the seat for stabilizing the cover, which needs to be removed and re-attached when changing upholstery. Gärtnäs produces ready-made upholstery in various standard fabrics, but it is also possible to order upholstery in the fabric or leather of your choice. Remove and replace the plastic glides from the legs. The metal base is mounted with four screws and can be replaced with a new one of the same type, or alternatively with a metal swivel base with wheels. Wheels can be easily be snapped off and changed.

Factory Disassembly

Disassembly of the Polyurethane (PUR) from the seat foam should only be carried out at the Gärtnäs factory or by a certified service partner.
