

# ENVIRONMENTAL POLICY

Gärtnäs AB develops, manufactures, renovates and markets functional furniture of high quality, design and durability with the help of well-known designers and experienced staff. We consider an active environmental policy to be a self-evident part of all company processes.

- We will, when purchasing input materials and chemicals, choose options that, as far as possible, are recyclable and environmentally friendly.
- We will, in our design and product development, utilise energy and raw materials so as to maximise the durability, ergonomics and lifespan of our furniture.
- We will actively work to reduce our consumption of fossil fuels for transport purposes by means of good logistical planning, a high load optimisation of goods transports and that vehicles, fuel and driving behaviour are environmentally friendly.
- We will use biofuel and green energy to heat our factory.
- We will actively work with environmentally friendly residue- and waste-management processes within the company and ensure a high level of recycling.
- We will actively work to minimise and phase out dangerous chemicals and replace them with environmentally friendly alternatives that are technically and economically justifiable.
- We will work to prevent emergencies and contamination by maintaining and servicing our machinery and equipment and by handling chemicals safely to protect our environment.
- We will work on a long-term basis with our improvement efforts, to achieve better environmental performance, in compliance with the relevant internal and external requirements and legislation that apply to the company's environmental aspects.
- All employees at Gärtnäs will have basic environmental training.

CEO Dag Klockby
